6-20-5

Guaranteed Analysis

Total Nitrogen (N)..... 6.0%

6.0% Ammoniacal Nitrogen

Available Phosphate (P₂O₅)20.0%

Soluble Potash (K₂O)..... 5.0%

Zinc (Zn)..... 0.6%

Derived from: polyammonium phosphates, ammonium acetate, monopotassium phosphates, dipotassium phosphates and zinc acetate

GENERAL INFORMATION

CHB 6-20-5 +CRJ are manufactured specifically as a liquid side dress & water run NPK plus zinc to be used to help prevent and correct zinc deficiencies that may limit crop growth and yields. CHB 6-20-5 +CRJ is a supplement to an adequate and balanced soil fertility program.

CHB 6-20-5 +CRJ is a complex mixture of zinc with nitrogen, phosphorus and potassium.

It is important to monitor crop needs and responses by maintaining an adequate tissue-testing program.

DIRECTIONS FOR USE

Mixing Directions - Be sure spray tank is thoroughly cleaned, fill 1/3 full with clean water, add product and continue filling with agitation. Always add this product to tank before adding pesticides.

Compatibility - CHB 6-20-5 +CRJ is recommended to be applied with a in row or sidedress starter fertilizer. Always do compatibility tests before mixing with phosphate products. If any precipitation occurs, it may be necessary to add a compatibility agent. Consult your Bio-Gro dealer for more information.

Applications - CHB 6-20-5 +CRJ can be applied by ground and aerial equipment, drip or overhead irrigation systems.

Dilution and Spray Volumes - Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. It is recommended to use a dilution of at least 50 parts of water to 1 part of CHB 6-20-5 +CRJ.

SUGGESTED APPLICATIONS

Optimum rate of application will vary between fields depending on soil and/or climatic conditions, stage of crop growth and size of plants. Application rates are best determined by soil and plant analysis recommendations.

CHB 6-20-5 +CRJ can be used on many crops where soil applied zinc applications are commonly used. Consult your Bio-Gro dealer for specific recommendations.

Field Crops: Beans, peas, corn, potatoes, soybeans, etc. Apply 2-4 pints with liquid fertilizer placed near the seed or in a sidedress prior to 40% of full plant height.

Vegetable Crops: Asparagus, celery, cole crops, cucurbits, lettuce, melons, onions, garlic, peppers, spinach, strawberries, tomatoes, etc. 1-6 pints during periods of rapid growth or nutritional stress.

Cereal Crops: Wheat, barley, oats, rice, rye, etc. Apply 1-6 pints at planting.

CHB 6-20-5 + CRJ should be used specifically for soil application in bands with starter fertilizer applications. Use the appropriate CHB mineral for water run and/or drip applications.

TIMING - Application timing is likely the most important factor in determining the response and value of all soil applied nutrients. Understanding the basic physiological functions of a crop is essential in planning proper nutrient timing.

Never Foliar Apply CHB 6-20-5 +CRJ at more than 1 pint per acre. ALWAYS dilute at least 50 parts of water to 1 part of CHB 6-20-5 +CRJ. If applications are required other than soil banding, water run applications are recommended in place of foliar applications.

CONDITIONS OF SALE

Seller and/or manufacturer warrants only that this product consists of the ingredients specified on this label. No one is hereby authorized to make any warranty and/or guarantee concerning the use of this product. Being that the use, timing, placement, rate, application and other conditions are beyond the control of the seller and/or manufacturer, the seller's and/or manufacturer's liability for handling, storage and use of this product is limited to replacement of product or refund of purchase price.
