

Less Weeds. More Bushels.

PRODUCT DATA SHEET

Drift Reduction Agent - Deposition Aid

PRODUCT DESCRIPTION:

DRT adjuvant is a droplet management adjuvant that is integrated with a drift reduction agent that allows for the increased spray depositions for deeper canopy penetration. DRT adjuvant helps deliver increased coverage by improving droplet uniformity and adhering to the targeted leaf surface. This deposition aid minimizes spray drift and reduces droplet evaporation, all equating to a higher performing potential for your crop protection program and yield potential in the field.

BENEFITS OF USING DRT

- Delivers greater, more uniform fungicide droplets that can drive deeper into the canopy and onto the leaves, for increased disease protection and improved performance.
- Contains multi-functioning technologies that eliminate the need for multiple adjuvants, equating to increased yield potential and profit opportunities when integrated into a spray management plan.
- Versatile and works effectively with a combination of herbicides and insecticides, from water soluble to granules.
- Approved by the Council of Producers & Distributors of Adjuvant Certification Committee.

PRINCIPAL FUNCTIONING AGENTS

Phytobland paraffinic oil, modified vegetable oil, fatty acids, alkyl and alkylaryl ethoxylates 100.00%
TOTAL **100.00%**

|  | LABELED RATES | |  | PACKAGING |
|---|---------------------|------------------------------|---|-----------------|
| | Ground, Aerial, CDA | 4.0 to 6.0 ounces/acre | | 2 x 2.5 gallons |
| | | 265 gallons One Way Totes | | |
