

JACKHAMMER®

- Monocarbamide dihydrogen sulfate, glycerine, alcohol alkoxylate ..... 89%
- Other ingredients..... 11%

### PRINCIPAL FUNCTIONING AGENTS

- Superior blend of water conditioning agents.
- Effective at alleviating antagonism.
- Unsurpassed droplet coverage and canopy penetration.

Jackhammer® is a proprietary blend of water conditioning agents, superior nonionic surfactants and humectants.

Jackhammer will help to alleviate antagonism from hard water impurities such as iron, calcium, magnesium and other impurities in the spray solution.

Jackhammer will not only maintain certain pesticides, such as glyphosate, in their most active form but it also improves droplet coverage and canopy penetration while slowing droplet drying, all of which combine to increase pesticide absorption into plants.

Soybeans

Dry Beans

Sugarbeets

Wheat

Barley

Sorghum

Corn

Sunflowers

Potatoes

## APPLICATION DIRECTIONS

- Jackhammer use rates are 1-4 qt/100 gal of water:
  - 1-2 qt/100 gal of water — when used as an AMS replacement for “loaded” glyphosate herbicides.
  - 2-4 qt/100 gal of water — when used as a nonionic surfactant and AMS replacement for “unloaded” glyphosate herbicides.

– 1-2 qt/100 gal of water — when used with herbicides containing paraquat or diquat.

- Consult a West Central Solutions Provider for rate recommendations when using with other pesticides.

Always read and follow product labels prior to use.

### PACKAGE SIZE

- 2x2.5 gal
- 275 gal
- Bulk
- Repack
