GENERAL INFORMATION

Boron is an essential plant nutrient that aids in vigorous plant growth. Because boron is not mobile within the plant, a continuous supply to all growing points is required from germination to maturity. Conditions that contribute to boron deficiency by reducing boron availability of supply include:

- low organic matter soils (<2%)
- leaching (especially with crops under frequent or continuous irrigation)
- water stress or drought conditions
- high potassium soils or soils recently fertilized with high potassium
- crop removal
- recently lined soils
- soils pH 6.0 or higher

DIRECTIONS FOR USE

It may be a violation of law to use this product inconsistent with its labeling.

RECOMMENDED USES

FOR SOIL APPLICATION:

Apply the recommended amount with ground equipment or by air in a volume sufficient for thorough coverage. Do not apply over 2 quarts of boron in any one spray application. If the crop requires more than 2 quarts per acre, split the application allowing 14 days between sprays.

Boron must be applied uniformly across the field. Apply alone; as a tank mix with other agricultural chemicals; or in liquid fertilizer. Always use sufficient agitation to ensure thorough mixing.

MICRO-PLUS 9% BORON is recommended for seasonal use of the following crops:

	Quarts/Acre	Liters/Hectare
FIELD CROPS		
Alfalfa	2 to 4 qts.	4 to 9 ltrs.
Clover	2 to 3 qts.	4 to 7 ltrs.
Corn	1 to 2 qts.	2 to 4 ltrs.

RECOMMENDATIONS FOR USE: Supplemental application of boron is recommended when soils test less than 1.0 ppm boron or tissue test levels fall below average values specified for the crop. In the absence of soil or tissue test data, use the suggested rate by crop. Boron is compatible with most agricultural chemicals. Conduct a jar test if in doubt about specified combinations. Follow this mixing order - (1) Water (2) Boron (3) Pesticide.
