

# KelpXpress™ 2-4-3

## GUARANTEED ANALYSIS

TOTAL NITROGEN (N).....	2.0%
2.0% Water Soluble Nitrogen	
AVAILABLE PHOSPHATE (P <sub>2</sub> O <sub>5</sub> ).....	4.0%
SOLUBLE POTASH (K <sub>2</sub> O).....	3.0%
Iron (Fe).....	0.134%
0.134% Chelated Iron	

Derived from Kelp Extract (*Ascophyllum nodosum*), Plant Protein Hydrolysate, Monopotassium Phosphate, and Iron EDTA.

Chelating agent is EDTA (ethylenediaminetetraacetic acid).

AVOID FREEZING. WARM, SHAKE AND RESUSPEND BEFORE USING.

Weight per gallon: 9.9 lbs. per gallon @ 68°F

This product is not considered hazardous under the Globally Harmonized System (GHS) regulations.

## GENERAL INFORMATION

### SHAKE WELL BEFORE USE

**FERTIGATION:** Can be used under normal practices of fertigation.

**SOIL APPLICATIONS:** Apply 2 to 4 pints per acre beginning at initial root flush periods. Subsequent applications should be made at monthly intervals with a maximum of 8 pints per season.

**PERENNIAL CROPS:** Apply 1.5 to 4 pints per acre beginning at initial root flush periods. Subsequent applications should be made at monthly intervals with a maximum of 8 pints per season.

**ANNUAL CROPS:** Apply at 1 to 3 pints per acre approximately 14 days after crop emergence and continue at 10 to 14 day intervals through flowering, fruit set and sizing periods. A maximum of 8 pints per season is recommended.

**RATE OF APPLICATION (foliar applications):** May be used at a rate of ½ pint to 2 pints per acre to supplement the fertigation program. Applications should be made prior to and during bloom periods.

**TREE AND NUT CROPS (foliar applications):** Apply up to 3 quarts per acre.

**COMPATIBILITY:** KelpXpress is compatible with many fertilizers that might be injected through fertigation equipment; however it is impossible to evaluate every potential combination. Always run a jar compatibility test before mixing with liquid fertilizers. This product is compatible with most pesticides commonly used on vegetable, fruit and agronomic crops.

**WARNING:** Do not use with Dormant Oil, Lime Sulfur, Spray Lime, or highly alkaline spray materials. Add product to the spray tank or pre-mix tank when it is about half full. Agitation in the tank is preferred to increase the speed of solubility. Where extremely cold water is used, allow a few extra minutes for the product to completely dissolve before spraying. Plant extract formulations may contain some natural sedimentation in containers. If this occurs triple rinse containers and pour rinsate directly into the spray tank.

**⚠ WARNING:** Cancer and Reproductive Harm -[www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)
