## GENERAL INFORMATION:

**Feature® Professional Soluble Microgranular Micronutrient** is manufactured through a reaction process using Lignin Sulfonic Acid (LSA) and ethylenediaminetetraacetic acid (EDTA) in combination with Magnesium, Iron, Manganese, and Zinc. Feature Professional is specifically formulated using a proprietary ratio of LSA and EDTA that optimizes its ability to supply the most effective source of elements in the safest form possible. Feature Professional is a highly soluble material that is used both in preventive and corrective measures to manage minor element nutrient levels. Feature Professional is designed to be used in combination with a balanced fertility program.
