## PRODUCT INFORMATION

Volacept D + V is a volatility and drift reduction adjuvant which is designed for use in dicamba tolerant cropping systems. The product should be used along with nozzle and pressure combination sufficient to generate an Ultra-Course droplet spectrum and suitable spray pattern.

## DIRECTIONS FOR USE

Prior to use, read all the directions on this label and on the label of all pesticides, fertilizers, and any other tank mix additives. Do not use unless a nonionic surfactant (NIS), water conditioner, drift reduction technology (DRT) and deposition agent are allowed or not excluded on the label. When using along with dicamba in dicamba tolerant crops review the website associated with the relevant dicamba containing product for any additional tank mix instructions.

## APPLICATION RATE RECOMMENDATIONS

**Use rate as a Drift and Volatility Reducing Agent with Dicamba Tank Mixes:**

Use Volacept D + V at 1.0 gallons per 100 gal spray mixture.

**Mixing:** To a clean spray tank add sufficient clean water to fill the tank to ¾ full. Be sure to agitate the tank during mixing and application. Add Volacept D + V to the spray mixture prior to adding the pesticide(s) and other adjuvants. Finish with remaining water and maintain agitation to mix. Be sure to allow sufficient time for mixing prior to application. When using a tank mix for the first time, prepare a jar test to assess the mixture for compatibility.
